QUOTED. Jan. 2, 2018. Vito Pirrera & John Jordon.

by

Check out what Vantage Consulting Group's Vito Pirrera and John Jordon had to say about companies using machine vision for inspecting high-throughput medical device parts.

"Machine vision [is] a way to improve quality and revenue. Although it will require a capital investment, that investment will be defrayed by additional efficiency, revenue, brand equity, relationship quality, and human health and safety. And with one vision system versus many human inspectors, you'll also be able to move inspectors to roles where the limits of human eyesight don't jeopardize business performance – or lives." –Vito Pirrera, cofounder and executive VP, & John Jordon, VP of business strategies, Vantage Consulting Group
