QUOTED. March 13, 2018. Carla Kriwet.

by

Philips has developed a contactless pulse oximetry monitoring technology that has shown promise in a small patient study. Check out what Philips Patient Care & Monitoring Solutions CEO Carla Kriwet said about it here.

"Vital-signs monitoring is crucial across all types of care settings, but for patient populations with specific conditions, managing their care in a less intrusive way is critical in order to avoid unnecessary distress. Contactless monitoring solutions will offer clinicians with a way to accurately measure vital signs for patients in a non-obtrusive way, and provide them with the data needed to know when to intervene." –Carla Kriwet, CEO, Philips Patient Care & Monitoring Solutions
