QUOTED. March 21, 2018. Jason Bhan.

by

Start-up firm Prognos has a lofty long-term mission: to use artificial intelligence and other smart technologies to eradicate disease. Check out what company cofounder Jason Bhan had to say about Prognos' use of AI here.

"Our vision is to use the data and the product and the capabilities we have to eradicate disease. In the interim – over the next five years – we will figure out how to predict where disease is going to occur and enable others to intervene at those points, so we can help people get diagnosed and then treated faster." –Jason Bhan, cofounder and chief medical officer, Prognos
