QUOTED. May 24, 2018. John Mandrola.

by

Single-center data presented at the Heart Rhythm Society annual meeting in Boston raised questions about failure rates for Abbott Laboratories's *Tendril* pacemaker leads. See what Baptist Health electrophysiologist John Mandrola said about it here.

This was a retrospective single-center study with nonrandomized group comparisons. It has serious limitations and is not yet published. That said, it's hard to dismiss an 18-fold greater risk for lead failure as spurious." – John Mandrola, electrophysiologist, Baptist Health (Louisville, Ky, US)
