QUOTED. Sept. 19, 2018. Martha Murray.

by

An anterior cruciate ligament (ACL) repair technology developed by MIACH Orthopedics has secured backing from investors, including the union for National Football League players, in a new round of financing. See what MIACH founder Martha Murray said about it here.

"We believe that *BEAR* [*Bridge-Enhanced ACL Repair*] technology has the potential to transform connective tissue repair, and we're gratified that Amzak [Health Investors], DSM [Venturing] and the NFL Players Association share our vision to explore its application in ACL repair. We look forward to accelerating clinical trials to further evaluate the less-invasive BEAR technology as a viable alternative to ACL reconstruction." –Martha Murray, founder, MIACH Orthopaedics
