QUOTED. Jan. 28, 2019. Mylene Yao.

by

Silicon Valley-based start-up Univfy is looking to help couples attain easier access to *in vitro* fertilization treatment and financing. Univfy co-founder and CEO Mylene Yao says the company has developed a business-to-business machine-learning-platform that allows IVF clinics to accurately predict the chances of IVF success rate for individual couples. See what she said about it here.

"Doctors mostly thought that age is the main determinant [for a woman's IVF success] and it's very important biologically, but it only contributes 50% of the prediction. If you're telling a woman her chances of IVF success are just based on age, you're missing half of the story."

–Mylene Yao, co-founder and CEO, Univfy
