

03 Dec 2019 | Analysis

QUOTED. 3 December 2019. Pat Baird.

by

While a lot of medtech companies are working on developing artificial intelligence and machine learning products, the technology is moving far faster than regulators can keep up. One self-proclaimed “standards nerd,” however, has taken it upon himself to aggregate already recognized AI/ML standards to try stay up-to-date with the technology. See what Philips Healthcare’s Pat Baird said here.

“The good practices we have now are going to be different than the good practices we have three to five years from now. So, it’s going to be evolving as we try to write it, and to me, that’s even more reason to get a snapshot of today and get it published quick.” – Pat Baird, regulatory head of global software standards, Philips Healthcare
