QUOTED. 8 March 2021. Martin Stürmer.

by

Right now, it appears that COVID-19 diagnostics are holding up against new variants of the virus being detected, but that may not always be the case scientists said at a recent webinar organized by Agena Bioscience. See what Martin Stürmer, laboratory head of IMD Labor in Frankfurt Germany, said about it here.

“Evolution will go on, and in the future there may be more data that tests might fail with new variants.” – Martin Stürmer, laboratory head, IMD Labor
